

Hello Scientist!

Please find following a booklet of Science work for after Easter. Everyone in your year group is being set the same work so you can always work together over the internet if you want to. The same work booklet will be uploaded to Go4Schools so that you have an online version if you want it. Additional resources and worksheet are included in this pack but will also be uploaded with the project overview on Go4Schools.

We thought you might like to find out a bit more about how the body works, so we have set work about the human body. This will be a really good way to understand how current issues like the Covid-19 Virus actually works. This is an important topic and taking time to really get to grips with the ideas behind it will help you when you return to school in September. Remember that Science is a learning journey, the better your foundations the more successful you will become! You will revisit these ideas again in later modules and be examined on them in your GCSE tests, so they are important!

The project work will last the whole term but is divided up into tasks that should take you around 1-3 hours to complete. The description of each task along with the resources needed and an outline of the activity is included. You will need a copy of the textbook which you can get online or has been sent out to you in the post. If you need a copy sent to you, please let us know by emailing Jclark@obhs.co.uk.

If you would like feedback on only of your completed work, or you would like your thoughts on any completed extra projects, you can email your usual Science teacher and they will get back to you.

We look forward to seeing you again soon and seeing the fantastic work you have produced.

Mrs Clark
